THREE DOCUMENTS AND A DATED RECORD

1 Owner Summary

2 Technical Evidence

3 Rules and Insurance

4 Assessment Record

1 · THE VERDICT

Your email can be forged and 14 firm addresses are in breach data. Two fixes below close it.

2 ways in open, each with its proof in the Technical Evidence and Findings. 7 settings to tidy are listed apart: each is worth fixing, but none opens your firm to anyone by itself.

2	7	2
WAYS IN	TO TIDY	HIGH

2 · WHAT IT COSTS IF USED AGAINST YOU

Stolen passwords. If a password was reused on a listed address, someone can open that mailbox and redirect a payment. Reported spear phishing losses averaged roughly \$119,000 per victim in 2025.

Source: Canadian Anti-Fraud Centre (RCMP, OPP, Competition Bureau), Fraud Prevention Month 2026: Top 10 frauds based on reported dollar loss in 2025

We assessed from outside, using public sources only. Nothing here means anyone has broken into your firm. It shows what is open today.

3 · FIX THESE FIRST, IN THIS ORDER

Each fix is given step by step and ends with a check that proves it is done.

1

Set your email to reject forged mail

HIGH

Attackers can send fake invoices and emails from your domain and recipients have no authoritative way to reject them. Closes F-02.

WHERE Your DNS settings	ROUGH TIME About 20 minutes a stage, over two to four weeks	PROOF IT IS DONE Run the reproduce command again. At each stage it returns the policy in force; the fix is done when it shows p=quarantine or p=reject.
----------------------------	--	--

Detail: Technical Evidence, F-02, p. 7

☐ Done Date _____

2

Reset the exposed logins and require a second sign-in step

HIGH

14 firm addresses on harbourview-llp.example are present in monitored breach databases. Closes F-01.

WHERE Each account named	ROUGH TIME About 30 to 60 minutes an account	PROOF IT IS DONE Each exposed account shows a new password and multifactor sign-in set to Enforced in your email admin console.
--------------------------------	---	---

Detail: Technical Evidence, F-01, p. 5

☐ Done Date _____

4 · WHAT HAPPENS NEXT

This week Start with fix 1. The Technical Evidence and Findings has the exact steps for each one.	30 Oct We re-check every open finding and record what has closed.	Before renewal Send the Assessment Record and the Rules and Insurance Briefing to your broker.
---	---	--

5 · EVERYTHING WE FOUND

2 ways in open, 7 to tidy, with where each is fixed

SEVERITY AT A GLANCE

■ High 2

ID	FINDING	SEVERITY	WHERE	TIME	DONE
F-01	Firm addresses in breach data	HIGH	Each account named	About 30 to 60 minutes an account	☐
F-02	No DMARC record	HIGH	Your DNS settings	About 20 minutes a stage, over two to four weeks	☐
F-03	Your site is missing 6 browser protections	MEDIUM	Your domain and website settings		☐
F-04	DNSSEC not enabled	LOW	Your domain and website settings	About 20 minutes	☐
F-05	Your robots.txt file publicly lists internal paths (/wp-admin/)	LOW	Your domain and website settings	About 15 minutes	☐
F-06	MTA-STS not configured	LOW	Your domain and website settings	About 30 minutes	☐
F-07	TLS-RPT reporting not configured	LOW	Your domain and website settings		☐

EVERYTHING WE FOUND, CONTINUED

ID	FINDING	SEVERITY	WHERE	TIME	DONE
F-08	WordPress publishes its author list	LOW	Your domain and website settings		☐
F-09	An online storage folder with your firm's name exists, called harbourview-llp. We could not open it and cannot tell whose it is. Please say whether it is yours	LOW	Your domain and website settings		☐

RATING, FOR COMPARISON ONLY

RATING

66 / 100

BAND: HIGH

Today: 66

Low

Moderate

High

Critical

0 to 34

35 to 59

60 to 79

80 to 100

High: a way in is open: email forged in your name would not be refused. A lower rating is better. The band is decided by what was found; the number only orders firms inside a band. All thirteen checks answered: forged email in your name, look-alike names, firm addresses in breach data, your website's certificate, your website's settings, files your site should not show, keys in your website's code, software versions, services that answer from the internet, host names on your domain, your domain's registration, spam, malware and phishing lists and code, paste and document searches. The rating describes what can be read from outside your firm. It says nothing about what is inside: devices, backups, staff sign-in settings or training.

LEAKTRACE AI IMPERSONATION CHECK

The check was not run for this reading. That is neither a finding nor a clear result. We ask again at the next check.

Detail: Technical Evidence, page 19.

WHAT WE CHECKED AND FOUND IN GOOD ORDER

Sending servers listed (SPF) An SPF record answers for your domain	No lookalike domains of concern None registered that we could attribute to anyone targeting you
--	---

WHAT WAS READ

We read the thirteen things that reach law firms on 28 September: nine clear, one open and three to tidy.

WHAT	WHAT WE READ	RESULT
Forged email in your name	The records that tell inboxes whether to refuse email sent as you (DMARC, SPF and DKIM).	Open
Look-alike names	55 names made from yours, each asked whether it is registered and set up for mail.	Clear
Firm addresses in breach data	Breach records for addresses at your own domain.	Clear
Your website's certificate	The certificate your website answers with: its name, its dates and who issued it.	Clear
Your website's settings	The headers and cookies your website sends to every visitor.	A setting to tidy
Files your site should not show	Common addresses for configuration files, code folders and cloud storage.	A setting to tidy
Keys in your website's code	The scripts your front page loads, for keys and passwords left in them.	Clear
Software versions	The versions your website and its script libraries show.	Clear

Table continues on the next page

WHAT WAS READ, CONTINUED

WHAT	WHAT WE READ	RESULT
Services that answer from the internet	15 ports on your web host, each asked whether it answers.	Clear
Host names on your domain	Host names on your domain, from its own records and public certificate logs.	Clear
Your domain's registration	Its registry record: the expiry date and the lock that refuses a move to another registrar.	A setting to tidy
Spam, malware and phishing lists	Whether your domain or its server is on a spam, malware or phishing list.	Clear
Code, paste and document searches	Public code, paste sites and search results that name your domain.	Clear
